Fungibility

Definition: Fungibility refers to the quality of being able to substitute or interchange one unit of a financial instrument for another unit of the same financial instrument. However, in trading, a financial instrument is said to be fungible if buy or sell of the same financial instrument can happen on a different market with the same end result.

Explanation

There are many financial instruments which qualify to be considered as fungible. Some of those financial instruments include individual stock, gold, silver, currencies etc. These fungible financial instruments are generally used in arbitrage trades as price difference often arises due to difference in location.
