## Term of the Day

### Double Dip Recession

Definition: When an economy or a country's Gross Domestic Product (GDP) growth is negative for the second time following a short period of positive growth, the phenomenon is termed as double dip recession.

### Explanation

This type of pattern or movement is extremely damaging for an economy. It hits the confidence of consumers and businesses in the country. Due to this, double dip recession may sometimes lead to a prolonged period of recession before final recovery. The first recession often leads to layoffs and spending cuts, as a result of which the demand for goods and services fall, leading to the second recession.
