Term of the Day

Cyclical Stocks

Definition: Cyclical stocks are referred to as those stocks that move in tandem with the economy as they have high correlation with the economic cycle.

Explanation

When the economy is going through a downturn, the profits of a cyclical company tend to drop and so its share price. Conversely, when the economy is on the upswing, its share price tends to go up with the profit growth. Cyclical stocks are opposite of defensive stocks as these are directly linked to the economic cycle while defensive stocks remain unaffected by different economic phases. Economic indicators like inflation, interest rates etc have direct bearing on these stocks. Investors with high risk appetite generally prefer cyclical stocks while those who cannot bear high risk normally settle for defensive stocks.
